EXTENSION ACTIVITY REPORT (29.11.2019)

On 29.11.2019, an awareness programme on waste management and pollution control was organized for the students of Government High School, Mookandapalli. The objective of the programme was to educate students about the importance of environmental conservation, sustainable waste management practices, and pollution control measures.

We began with informative presentations on the concepts of waste management and pollution control. Students were introduced to the different types of waste, including solid, liquid, and hazardous waste, as well as the various sources of pollution such as air, water, and soil pollution. Following the presentations, interactive discussions were held to engage students in exploring the environmental issues facing their community and potential solutions. Students actively participated in brainstorming sessions, sharing their ideas and insights on how they can contribute to reducing waste generation and minimizing pollution.

To provide practical learning experiences, hands-on activities were organized, including waste segregation demonstrations and pollution monitoring exercises. Students were guided through the process of segregating waste into different categories such as recyclable, biodegradable, and non-recyclable, emphasizing the importance of proper waste disposal practices. The awareness programme on waste management and pollution control proved to be an enriching and enlightening experience for the students of Government High School. By fostering a deeper appreciation for environmental conservation, the programme has equipped students with the knowledge and skills necessary to become responsible and environmentally conscious citizens.
